

WHERE INNOVATION IS TRADITION

Cyber Security Awareness Month

Our Shared Responsibility

National Cyber Security Awareness Month (NCSAM) is observed annually in October to promote cyber security. It is designed to educate and raise awareness about staying safe online.

The observance was started 11 years ago as a collaborative effort between government and industry. The annual effort is coordinated by the National Cyber Security Alliance.

This year's theme is Our Shared Responsibility. It is a reminder that each person has a role in securing his/her part of cyberspace, including the devices and networks he/she uses.

Join us on Wednesdays, beginning Oct. 8, for four seminars that will provide tips and information on topics relevant to the Mason community. Seminars are from 3 to 4 p.m. in Johnson Center Room E on the Fairfax Campus. Refreshments will be served.

For additional resources, check the IT Security website at <http://itsecurity.gmu.edu> as well as the website of staysafeonline.org.

Everyone has a role in securing his/her part of cyberspace...
